

## Space Odyssey – Voyage to the Planets Video Worksheet

We will be watching a two part video series called: Space Odyssey: Voyage to the Planets as our coverage of the planets in our Solar System. As you watch this mock-umentary about a fictional voyage to some of the planets in our solar system, write down as much information about each world that is visited as you can. This information will be helpful to you on the final exam. We will be going over these papers at the end of both videos. You will be graded not only on what you have written, but whether or not you have anything to share for the good of the group when we review these papers. I will pause the video from time to time for you to copy down any posted statistics about each planet as these appear. Pay attention please and write down as much as you can.

Venus:

Mars:

Mercury:

Sun:

Asteroids:

Jupiter:

**Io (a moon of Jupiter)**

**Europa (a moon of Jupiter)**

**Titan (a moon of Saturn)**

**Saturn:**
